

Relax Outdoors ErgoCliner

3180 (Manual)

Weather-proof outdoor recliner mechanism that supports up to 300 lbs.

The ErgoCliner motion furniture mechanism is a great fit for patio furniture that require extra reclining comfort.

This mechanism is specially treated to resist the outside elements and can support up to 300 lbs. (136 kg) effortlessly.

Raw Steel > Zinc Coated > Black Powder Coated

The Coating Process

The ErgoCliner mechanism functions outside thanks to a three-step weather-proofing process.

First, the raw steel goes through a chemically pressurized spray-cleansing process to remove oil, dirt, and dust. Then, the mechanism is coated in zinc to prevent rusting. Finally, a specially formulated black powder coating is added to give another layer of protection and a smooth, clean appearance.

This outdoor motion furniture mechanism offers great fluid transitions from all available resting positions.

Attributes include:

- Effortless motion for EZ operation by all ages
- Harsh testing, including a 96-hour salt spray test

Key Features & Benefits

- Tested at 300-lb. (136 kg) weight capacity
- Simple installation saves production time
- Easy activation and closing
- Diverse styling capabilities
- Delrin bushings in key pivot points for durability and smooth operation
- A broad range of seat widths available
- Firm main ottoman support with mid-ottoman that meets US C.P.S.C. standards
- D-1654 salt spray tested for 96 hours
