

Serenity™ seat cushion system

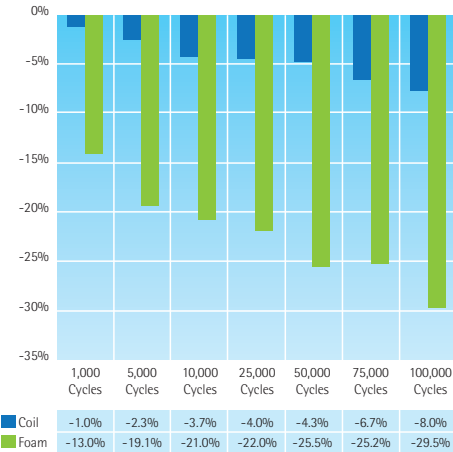

with **Bolsa**® coil technology

Shown with patent-pending
CoilMax™ Technology

The best bedding comfort technology, now in a seat cushion

Dramatically less breakdown when compared to coils alone

Leggett & Platt® Home Furniture Components presents the Serenity™ Seat Cushion System, a unique design of quality comfort unlike any other furniture cushion fillers. The Serenity™ Seat Cushion System is constructed of high-density, fortified tempered-steel springs encased in fabric. This provides a long-lasting cushion with maximum comfort.

Engineered for Value

To create Serenity™ coils, the specially designed springs are stress-relieved to improve resiliency and performance and extend furniture life. As a result, Serenity™ provides up to 21% less breakdown from use than traditional foam seat cushions. With fabric-encased coils and the reduction of warranty-covered product replacements, Serenity™ is the smart choice for seat and back cushions.*

*Reduced warranty-covered product replacements when compared to all-foam seat cushions.

Streamlined Manufacturing

Deliver customized comfort with the Serenity™ Seat Cushion System. The coils in Serenity™ are precisely formed by computer control, then pre-compressed and inserted into premium Quantum™ lightweight fabric to create a soft, noise-reducing pocket around each individual coil. The automated process offers a competitive edge with faster production time and lower costs than traditional furniture cushion filling.

Durability and Support You Can Feel

Serenity™ features the same coil technology as our Softlux™ Seat Foundation System, utilizing fabric-encased coils in seat cushions for an even higher level of comfort and support. Each coil flexes independently and adjusts instantly to optimize body contouring and support. The barrel-shaped coils offer initial luxurious softness, followed by firmer support that responds to applied weight. The design of our fabric-encased coils works to maintain structural integrity while offering the highest support and comfort available. Fabric-encased coil cushions are more resilient than foam, providing as much lift force when load is removed as when load is applied.

When compared to foam:*

- Up to 21% less seat cushion breakdown with fabric-encased coil seat cushions over the life of the product.
- 16% less seat cushion breakdown with fabric-encased coils during typical warranty periods.
